FEATURES

- Tough, rugged yet stylish
- Designed to fit like a shoe, minimizing foot and ankle movement inside the boot. The increased foot stability allows the boot to "Track" the wearer's foot, affording greater agility while reducing "slip and falls" and "ankle twists"
- CLAW "TOES FREE" System - The continued movement of the toes inside the front of the boot creates a bellows effect pumping out hot air and taking in cool which reduces bacterial growth
- The CLAW Sole is ergonomically designed to disperse body weight and reducing stud pressure and foot fatigue, whilst maximizing comfort
- Profile positioned on the instep is designed to assist in climbing.
- Dual density PVC creates a shock absorbent layer
- Rubber co-polymers in both sole and shaft, slows acid chemical attack while increasing the boot's life
